

Test Case ID: GTC-116

Title: Test Case: ValidateUserAuthentication

Description: Verify that the system correctly authenticates users before allowing them to access sensitive data or perform actions.

Steps:

Attempt to access a restricted area of the system without proper authentication credentials.

Observe the system's response.

Attempt to access the same area with valid authentication credentials.

Observe the system's response.

Expected Result: The system should deny access without valid authentication credentials and grant access with valid credentials.

Confidence: High
