Test Case ID: GTC-124

Title: Test Case: VerifyAutoGeneratedErrorHandling

Description: Test the system's ability to handle errors during the auto-generation process.

Steps:
1. Introduce a simulated error during auto-generation.
2. Observe how the system responds to the error.
3. Check if the system provides appropriate error messages and continues functioning correctly.

Expected Result: The system handles errors during auto-generation gracefully, providing informative error messages and maintaining functionality.

Confidence: 90%
