Test Case ID: GTC-118

Title: Test Case: TestAPIIntegration

Description: Validate the integration of the system with external APIs to ensure seamless communication and data exchange.

Steps:
Send a request to an external API using the system's interface.
Check for a successful response from the API.
Send a request with invalid parameters or credentials.
Verify that the system handles the error gracefully and provides appropriate feedback.

Expected Result: The system should successfully integrate with external APIs and handle errors properly.

Confidence: High
